- Single or Multiple server remote client
- 16 or 128 Channels of remote live viewing
- 4 or 16 Channels of remote playback
- Fixed or Customized stream profile
- Supports mobile devices
- 1 or 10 Layer E-map support
- Email notification
- Digital watermarking
- ST-NVR-EVSPRO+ version features POS Integration, Counting application, PTZ control and more

Eye View Smart (EVS) PC Based Intelligent NVR Software With Embedded Video Analytics

The SecurityTronix ST-NVR-EVSPRO series is the latest PC based analytics software solution, known as Eye View Smart, or EVS. The EVS software is available in both the standard 32 camera version and the 64 camera EVS Plus version that showcases an expanded feature pack. The EVS software supports over 1,000 different IP camera models from more than 45 brands. Additional manufacturers and cameras are added on a regular basis to make EVS one of the most flexible NDVR software applications available in the industry today. The standard EVS software is included with the purchase of any SecurityTronix PRO series IP camera.

The EVS suite includes mobile apps, map overlay, motion detection, event email notifications, and motion recording. The standard EVS software is field upgradable to the EVS Plus version. Users can have confidence that their surveillance system can evolve with their needs as the EVS Plus hosts additional advanced analytics such as foreign object placement, missing object notification, camera occlusion, and more.

The SecurityTronix EVS and EVS Plus software suites bring compelling value to the surveillance recording, analytics, and notification market. These all-in-one software suites are the perfect compliment to the SecurityTronix IP camera line. The SecurityTronix lab can customize complete and scalable systems using EVS software and several different hardware platforms to meet user needs.
