## Description

The 25-ft. Antenna Mounting Pole is designed for mounting pole-compatible antennas in outdoor applications. The pole is specifically designed for use with parked RVs but can also be used for mounting outdoor antennas alongside buildings. The pole is not free standing and must be mounted to a vertical structure. Depending on how the five, telescoping sections are twist-locked in place, the antenna pole can be configured to any height between 6 ft. and 25 ft.

The pole can be used with Wilson building Omni Antennas (304421, 304422, 304424, 304421) Wilson directional Yagi Antennas (314475, 314411) Wilson Outdoor Panel Antennas (314453, 314473) and any other pole-compatible antenna.

Using the included 3M VHB™ adhesive strips, the pole’s mounting hardware can be attached to the side of an RV or building structure. The side surface must be clean and flat for the pole to be securely mounted.

Benefits of using the pole included increased isolation between the donor and server antenna, along with providing a more direct path to the cell tower by getting the antenna above obstructions.

## Specifications

Material	Aluminum
Pole Max Height	25 ft.
Pole Collapsed Height	6.15 ft.
Pole Diameter	2.4 in.
