

# Manage Your Network, Anywhere, With WilsonPro Cloud.

The industry's first platform  
for cloud-based management  
and monitoring of cellular  
signal repeaters.

**WilsonPro Cloud** allows an integrator to manage and monitor installed cellular repeaters from a web browser on a phone, laptop, or tablet. You will receive notifications that alert you to any status changes of your installed amplifiers, including notifications if a system ever goes offline.

With WilsonPro Cloud you can remotely reset an amplifier or selectively turn specific frequency bands on and off. This helps avoid time-consuming and costly troubleshooting site visits. The platform also provides report generation, performance and signal level histories, remote tuning, and the ability to organize repeaters by location.

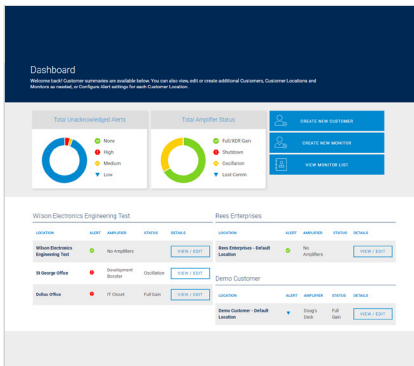

**Wireless LTE connectivity is free for the first year following installation of your repeater or included with the purchase of a subscription.**

**No ethernet connection required.**

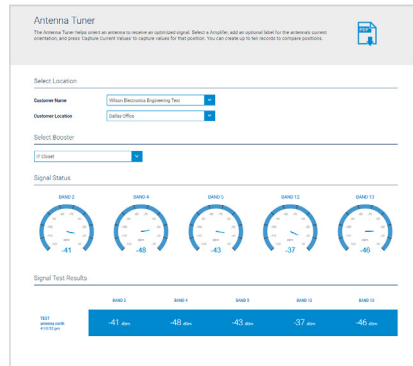

# Currently Available on Enterprise Repeaters

## Enterprise 4300, 1300, and 1337R

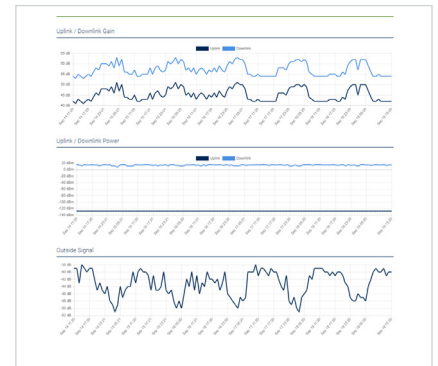

- Amplify 5G
- Scalable and customizable to fit any building
- Remotely manage the system with WilsonPro Cloud
- Optimize signal with built-in network scanning
- Available as a rack or wall mount

WilsonPro Cloud shows all of your customers.

Donor (outside) antenna tool reduces installation time.

Performance graphs assist with remote troubleshooting.

WilsonPro Cloud is the industry's first web-based platform for remote monitoring and management of cellular signal amplifiers.

Customizable alert notifications.

Monitor repeaters in real time.

Remotely reset repeaters and bands.

Organize repeaters based on location.
